

SIDDHEYA PATADE

East Brunswick, NJ | (732) 812-1302 | spatade3@gatech.edu

EDUCATION | CERTIFICATIONS

Master of Science (M.S.) | Computational Data Analytics | Georgia Institute of Technology | Expected May. 2027
Bachelor of Science (B.S.) | Business Management | Stockton University | 2024

TECHNICAL COMPETENCIES

Programming Languages: Python, SQL, VBA, R, JavaScript

Machine Learning & AI: Predictive Modeling, Statistical Analysis, Data Mining, OpenAI API Integration, Natural Language Processing, Document Parsing, TensorFlow, Scikit-learn, Multi-Agent AI Systems, Agentic Workflows, Markov Chains, Graph Network Analysis

Data Visualization: Tableau, Looker, Power BI, Excel, Advanced Analytics, Matplotlib, Seaborn, Dashboards

Database Technologies: SQL Server, PostgreSQL, MySQL, Data Warehousing, Query Optimization, NoSQL, MongoDB, Trino

Cloud & Big Data: AWS (S3, Lambda, Redshift), Azure Data Services, GCP (BigQuery), ETL Pipelines, Data Lakes

Development Tools: Git, GitHub, Jupyter Notebooks, VS Code, PyCharm, PyTorch, Power BI (DAX, Data Modeling, Tabular Editor), Kubernetes, Docker, Dagster, FastAPI, Next.js, React

Data Engineering: ETL Pipeline Development, Data Validation & Quality Assurance, Automated Testing Frameworks, Audit Logging Systems, Database Optimization, Dagster Orchestration, Pipeline Scheduling, Google ADK

PROFESSIONAL EXPERIENCE

NPPG (Pinnacle) | Shrewsbury, NJ | Remote
Data Analyst, (Data Engineering & ML)

July 2025 - Present

- Sole technical hire who built the firm's data analytics capability from zero. Platform now used by 10 senior executives for daily risk triage of 13,905 financial plans managing \$500M+ in assets, replacing manual spreadsheet workflows with automated risk scoring, predictive modeling, and real-time dashboards.
- Engineered 24 automated Dagster data pipelines (88 assets, 24 scheduled jobs) spanning risk scoring, Markov chain modeling, graph network analysis, and workload optimization, replacing manual workflows and enabling proactive oversight of \$500M+ in managed assets.
- Developed 7 production ML models (GradientBoosting, RandomForest, XGBoost) with automated 3-model shootout selection and 5-fold cross-validation. Risk classifier achieves 0.911 AUC with 82% recall; churn model achieves 0.986 AUC with 92% recall; system generates 53,000 predictions per nightly run across 13,905 plans. Built out-of-time backtesting framework (PY2023 to PY2024) validating that reviewing just 12% of plans catches 39% of failures, a 3.3x triage lift reducing manual review burden during testing season.
- Delivered full-stack operations dashboard (Next.js, FastAPI, SQL Server) used daily by 10 senior executives for plan-level risk triage. Interactive graph network visualizations surface risk contagion patterns previously invisible in tabular reports, enabling teams to prioritize the 12% of plans representing the highest failure risk.
- Built executive reporting platform in Power BI that gave CFO first-ever visibility into workflow bottlenecks across 13K+ work units, reducing monthly board reporting prep by 80%.
- Codified complex regulatory logic into an automated rules engine with per-entity audit trail generation. Each missed failure exposes the firm to penalties up to \$500K per case.

NPPG (Pinnacle) | East Brunswick, NJ
Implementation Specialist

December 2024 – July 2025

- Architected scalable document comparison algorithm processing 100+ plan documents in 200 seconds (99.7% cycle time reduction from manual 1,000+ minutes), achieving 1,800 plans/hour throughput capacity.
- Deployed internal audit tools with custom Python GUIs, streamlining operational workflows and enabling non-technical users to perform data validation and reporting tasks independently.

United States Marine Corps | Various Locations

(May 2020 - 2024)

Bulk Fuel Operations Specialist, Logistics & Operations Analytics

- Managed inventory tracking and accountability for up to 1 million gallons of fuel, ensuring accurate data logging and reporting across multiple systems.
- Developed and implemented performance tracking systems, providing data-driven counseling and corrective action plans through formal documentation processes.
